

Call Delivery Workbook — Tab Disposition Summary

What happened to all 24 tabs of the July 2026 Call Delivery Strategy workbook

Overview

The old workbook mixed four different kinds of content on 24 tabs: group schedules, staffing assignments, reference data, and broken or duplicate sheets. In the new process, every tab has exactly one home: schedules live in per-group intake files, staffing lives in the Assignments generator, reference data lives on Reference tabs in the master workbook, and dead weight is retired.

Replaced by new tools (2 tabs)

Old tab	Replacement
Daily Rollup	New Daily Rollup tab in the master — self-assembling from the imported schedule table. The old tab carried 219 broken-reference errors.
Assignments	Call_Delivery_Assignments.xlsx — seed-driven fair-rotation generator with a fairness check.

Converted to standard intake files (12 tabs)

Original 8: FE, BE, PCO, Auto, Repo, MOD, Branch Central, Branch Vendor — 628 July passes converted, each file carrying its group's strategy notes, lists, and blitz calendar.

Added 4 (schedules that were hiding under other names):

New intake file	Source tab	Notes
Card.xlsx (135 passes)	Card Passes	COLLECTION block converted; ASAP passes mapped to their hour slots. PCO/Recoveries card sections had no July passes.
ARC.xlsx (40 passes)	ARC	Six daily sub-strategies preserved in the Special Instructions column. Old tab was 218 rows x 272 columns of mostly formatting bloat.
Optional_Products.xlsx (14 rows)	Optional Products	Daily priority order (First/Second/Third) carried in Segment and Instructions.
CET.xlsx (blank)	CET	Every volume cell in the old tab was a broken link; standing priority ladder (DSA Expired, DAS Exhausted, DSAR 30+) documented in the notes panel for CET to re-supply.

Consolidated into master Reference tabs (6 tabs)

New reference tab	Source tab(s)	Purpose
Ref Voice	Voice	Daily Female/Male voice calendar. The Daily Rollup now reads the day's voice from here automatically.
Ref AM Voice IDs	AMs	Campaign-to-auto-message voice ID lookup (female/male IDs per campaign).
Ref Card Hours	Card Schedule	Daily open/close + week number. Only 32 of the old tab's 2,568 rows held data. The Daily Rollup pulls Card hours from here by date.
Ref Branch Strategy	1Pay + 2Pay Branch Strategy	Standing weekly list priorities (List ID,

		priority, timezone) for branch calling.
Ref Blitz Rules	Blitz	Standing blitz rules: 30-minute recall, evening windows, designated lists. Per-date blitz calendars already live in the FE/BE intake notes panels.

Broken or dead — the new process is the fix (4 tabs)

Old tab	Situation
OM_All	Held no data; pulled from an external workbook that was never attached (the source of its errors). The owner of that external file should now submit a standard intake file like every other group.
CARE	100% broken references — nothing recoverable. CARE starts fresh with a blank intake template.
West Coast	Effectively empty. Blank template when the pilot ramps up.
Sheet19	Byte-for-byte duplicate of Card Schedule. Retired; nothing lost.

Net result

- 24 old tabs → 12 intake files + 1 master workbook (rollup, consolidated table, 5 reference tabs) + 1 assignments generator.
- 817 July passes now flow through one consolidated, importable table — up from 628 after adding Card, ARC, and Optional Products.
- Every number on the Daily Rollup traces to an intake row or a reference tab; zero cross-workbook links, zero broken references.

Prepared July 2026 — Call Delivery workflow streamlining project.
